I like the idea of relishapp.com, i.e. that you have Cucumber / Gherkin features and you generate "living docs" from them. However, the Relish SaaS is awful.. I'm looking for an alternative. Ideally self-hosted Open Source like Sphinx, but I'm not completely opposed to SaaS solutions. Especially Sphinx would be great as I could combine it with other docs and use readthedocs.org for deployment.

## **Cucumber · GitHub**

The name and the optional description have no special meaning to Cucumber. Their purpose is to provide a place for you to document important aspects of the feature, such as a brief explanation and a list of business rules (general acceptance criteria).

## **Gherkin Reference - Cucumber Documentation**

In general, Cucumber features are human-readable documentation which is also an executable test suite, meaning that documentation and tests always agree. Cucumber is useful in communicating with non-programmer stakeholders about documentation and tests.

## **cucumber - RIP Tutorial (Stack Overflow Documentation)**

Testwise Cucumber is a framework that understands Gherkin and runs the automated tests. It sounds like a fairy tale, you get your documentation described in Gherkin and tests just run. Actually, it is not that simple, each step from documentation should have underlying test code that manipulates the application and should have test conditions.

You can read more about the Given-When-Then convention at the Cucumber reference documentation. Since Karate uses Gherkin, you can also employ data-driven techniques such as expressing data-tables in test scripts. Another good thing that Karate inherits is the nice IDE support for Cucumber that IntelliJ and Eclipse have.
