## **DNA Topoisomerase Protocols Volume I**

All cells have two major forms of topoisomerases: the type I enzymes, which make single-stranded cuts in DNA, and the type II enzymes, which cut and pass double-stranded DNA. In this unit, an in vitro assay for

DNA replication, transcription and chromosome segregation. Although the biological functions of TOP2 are important for ensuring genomic integrity, the ability to interfere with TOP2 and generate enzyme-mediated DNA damage is an effective strategy for cancer chemotherapy.
