The design implements a 32-bit instruction set, with 32-bit registers and a 32-bit internal data bus.The address bus is 24-bits and does not use memory segmentation, which made it popular with programmers.Internally, it uses a 16-bit data ALU and two additional 16-bit ALUs used mostly for addresses, and has a 16-bit external data bus. For this reason, Motorola referred to it as a 16/32-bit ...
