The sum of the three interior angles in a triangle is always 180° . The Triangle Sum Theorem is also called the Triangle Angle Sum Theorem or Angle Sum Theorem.

Triangle Sum Theorem - Online Math Learning

The key to this proof is that we want to show that the sum of the angles in a triangle is 180° . And we already know that a straight line's angle measures 180° . So we look for straight lines that include the angles inside the triangle.
Proof (1) $m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ$ // straight line measures 180°

Recall that by the triangle angle sum theorem, the sum of the measures of the angles in a triangle is 180° . Using this fact, it is possible to find the value of a variable. When the angles of a triangle are given by expressions with variables, add these expressions together. By the triangle angle sum theorem, their sum should be equal to 180° .

The sum of the measures of the angle inside of a triangle add up to 180 degrees. That's all we're doing over here. And so let's see if we can simplify this a little bit. So these two guys-- 90 plus 90's going to be 180, so you get 180 minus theta plus 32 is equal to 180 degrees.
