SLI or Scalable Link Interface is a multi-GPU technology from

Get Free Nvidia Sli Motherboard Manual

Nvidia. It is based on the principle of parallel processing where two or more GPUs share the load of game or graphics application. In SLI you can connect and run multiple (up to four GPUs) graphics cards on a single motherboard and thus double, triple or even quadruple your graphics performance in gaming or other graphics applications.

What is SLI & List of SLI Graphics Cards from Nvidia

According to the motherboard manual, it's SLI compatible.

When I go into the nVidia control panel, I can see details for both graphics cards.

However, I don't see any option for enabling SLI. Any suggestions?

Thanks! You can't use GeForce Boost with a 9800GT. It only works with a 8500GT or

show up in the NVIDIA Control panel.

Additionally there comes the missing P2P over PCIE on RTX cards into place which is only available with NVLINK!!! With nvidia-smi the links are shown as enabled and even SLI capable - see info below. So I think there is no technically reason refusing this option.
